- TI** - ESTIMATION OF **TIME SHIFT** CAUSED BY SUBSURFACE **VELOCITY ANISOTROPY**
- AU** - JENNER, E L; WILLIAMS, M C
- SO** - GR BRIT 2,377,495A, P 2003.01.15, F 2002.05.14, PR US 2001.05.15 (APPL 855,925) (G01V-001/28) (38 PP; 26 CLAIMS)
- AB** - A method comprises a system for processing seismic data to estimate **time shift** resulting from **velocity anisotropy** in the earth's subsurface. A gather of seismic data traces is formed and selected seismic data traces included in the gather within selected time windows are cross-correlated to estimate the **time shift** in the seismic data traces included in the gather resulting from **velocity anisotropy** in the earth's subsurface. The **time shift** data can then be used to correctly align gather traces for improved AVO analysis, or to highlight geological features such as vertically aligned fractures.

- TI** - 3-D CONVERTED SHEAR WAVE ROTATION WITH LAYER STRIPPING
- AU** - GAISER, J E
- SO** - US 5,610,875, C 97.03.11, F 95.09.29 (APPL 536,429) (G01V-001/00; G01V-001/36) (8 PP; 6 CLAIMS)
- AB** - A method is described for using a compressional-wave source to produce converted shear waves which are subjected to Alford 4-component rotation to align the observation coordinates with the natural coordinates of the principal anisotropic axes of a birefringent formation. The static **time shift** between the fast and the slow shear wavefields due to shear-wave splitting is determined so that they can be synchronized to isotropize the birefringent formation. From those data, fracture-plane orientation can be determined. Based on those data, the direction of a deviated borehole is aligned perpendicular to the fracture plane strike. For a deep-seated target formation, shallower layers are isotropized prior to rotation and synchronization of the converted shear wavefields originating from that deeper formation.

- AB** - P-SV data from the Barinas Basin (Venezuela) was processed with the goal of estimating the birefringence effect caused by an anisotropic layer. The target zone is a fractured carbonate reservoir at 3,000 m located in SW. Venezuela. The time lag between fast and slow S-waves (S-wave splitting) and the angle between line azimuth and orientation of the natural coordinates are determined using the Harrison rotation method based upon a modeling of the cross correlation function between rotated radial and transverse field components. Due to the small statics observed on the brute stacks of radial and transverse components, the **time shift** could be associated with splitting effects due to the carbonate reservoir in this area. (Longer abstract available) (Original article not available from T.U.)

TI - STRUCTURAL IMAGING IN THE REAL WORLD
AU - JOHNSON, J D
SO - LEADING EDGE (GEOPHYS EXPLOR) V 11, NO 1, PP 32-36, JAN 1992
AB - SIGNIFICANT ADVANCES IN SEISMIC IMAGING/INVERSION DURING THE LAST FEW YEARS HAVE IMPROVED THE ABILITY TO MAP COMPLEX STRUCTURES. TWO-DIMENSIONAL POSTSTACK DEPTH MIGRATION HAS BEEN AVAILABLE TO EXPLORATIONISTS FOR OVER 10 YR, AND 3-DIMENSIONAL POSTSTACK AND 2-DIMENSIONAL PRESTACK DEPTH MIGRATION HAVE BECOME ROUTINELY AVAILABLE TO COMPANIES WITH SUFFICIENT COMPUTATIONAL RESOURCES. SEVERAL ALTERNATIVE ALGORITHMIC APPROACHES HAVE BEEN DEVELOPED THAT SUCCESSFULLY ACCOMPLISH INVERSE PROPAGATION OF ACOUSTIC WAVES THROUGH HETEROGENEOUS MEDIA. ACCURATE METHODS THAT CAN HANDLE STEEP DIP AND LARGE LATERAL VELOCITY CHANGES INCLUDE FREQUENCY-DOMAIN APPROACHES (SUCH AS F-X SUMMATION AND PHASE **SHIFT** PLUS INTERPOLATION) AND **TIME**-DOMAIN APPROACHES (SUCH AS REVERSE TIME AND KIRCHHOFF WITH ACCURATELY COMPUTED TRAVELTIMES). ALTHOUGH PARTICULAR IMPLEMENTATIONS OF EACH METHOD HAVE CONTRASTING ADVANTAGES AND DISADVANTAGES, THE PROBLEM OF SIMULATING ACOUSTIC WAVE PROPAGATION IS ESSENTIALLY SOLVED FOR USERS OF STATE-OF-THE-ART IMAGING TECHNOLOGY WHICH, FOR THE PURPOSE OF THIS DISCUSSION, IS 2-DIMENSIONAL PRESTACK DEPTH MIGRATION. ASPECTS OF THESE PROBLEMS ARE DESCRIBED AND A FEW APPROACHES TO SOLUTIONS ARE SUGGESTED.

TI - METHOD OF LAYER STRIPPING TO DETERMINE FAULT PLANE STRESS BUILD-UP
AU - WINTERSTEIN, D F
SO - US 5,060,204, C 91.10.22, F 90.06.27 (APPL 545,030) (G01V-001/36; G01V-001/40) (30 PP; 16 CLAIMS)
AB - A METHOD FOR ANALYZING SEISMIC SHEAR WAVE DATA USES A LAYER STRIPPING TECHNIQUE TO DETERMINE FAULT PLANE STRESS BUILD-UP. POLARIZATION DIRECTIONS OF SHEAR WAVE DATA, FROM EITHER A VERTICAL SEISMIC PROFILE OR FROM SURFACE REFLECTION DATA, ARE ANALYZED, AND TIME LAGS BETWEEN FAST AND SLOW SPLIT SHEAR WAVES ARE DETERMINED. NATURAL POLARIZATION DIRECTIONS OF AND TIME LAGS BETWEEN THE SPLIT SHEAR WAVES IN AN UPPER LAYER ARE DETERMINED ABOVE THE SHALLOWEST DEPTH WHERE DATA CUES SUGGEST POLARIZATION CHANGES TAKE PLACE. SOURCE AND RECEIVER AXES OF THE DATA BELOW THE DEPTH OF POLARIZATION CHANGES ARE ROTATED BY AN AZIMUTH ANGLE, TO BRING THE AXES INTO PROPER ALIGNMENT. A STATIC **TIME SHIFT** IS THEN APPLIED TO ELIMINATE THE TIME LAG IN THE UPPER LAYER ABOVE THE DEPTH WHERE POLARIZATION CHANGES WERE INDICATED.

TI - A FREQUENCY-DOMAIN METHOD FOR **TIME-SHIFT** ESTIMATION AND ALIGNMENT OF SEISMIC SIGNALS

AU - SIMAAN, M

SO - IEEE TRANS GEOSCI REMOTE SENSING V GE-23, NO 2, PP 132-138, MARCH 1985

AB - ALIGNMENT OF SEISMIC SIGNALS USING TIME SHIFTS OBTAINED FROM FIRST BREAKS OR THROUGH CROSS-CORRELATION TECHNIQUES IN THE TIME DOMAIN WITHOUT INTERPOLATION CAN ONLY BE DONE TO WITHIN AN INTEGER MULTIPLE OF THE SAMPLING PERIOD. IN MOST SEISMIC APPLICATIONS, THE ACCURACY OF SUCH TECHNIQUES IS NOT SUFFICIENT. ON THE OTHER HAND, ALIGNMENT BETWEEN ONLY 2 SIGNALS CAN BE ACHIEVED TO WITHIN A FRACTION OF THE SAMPLING PERIOD BY FITTING A PARABOLA TO THE CROSS- CORRELATION PEAK. IN THIS PAPER, A NEW ALIGNMENT PROCEDURE IS PRESENTED IN WHICH THE TIME SHIFTS NECESSARY TO ALIGN SIMULTANEOUSLY AN ENSEMBLE OF SIGNALS ARE DETERMINED THROUGH A PARAMETER-OPTIMIZATION PROBLEM IN THE DISCRETE-FREQUENCY DOMAIN. A COMPARISON OF THIS PROCEDURE WITH THE PARABOLIC FIT PROCEDURE IS PERFORMED ON SYNTHETIC DATA WITH VARIOUS LEVELS OF SIGNAL-TO-NOISE RATIOS. THE EFFECTIVENESS OF THIS TECHNIQUE IS DEMONSTRATED ON A REAL VERTICAL SEISMIC DATA SET. (21 REFS.)
